Briefly explains what the SAP Business process in adding the logo, figure 1. This shows the SAP Business Suite. Integrated applications provided with the SAP Business Suite software allow companies to run and optimize business and IT strategies. It also offers the ability to perform essential processes and specific to the sector enterprise support with modular solutions designed to work with SAP or other software from other suppliers. Organizations and departments in all industries can deploy our enterprise applications gradually to address specific business challenges

at the right time and without costly upgrades. Business applications provide a better information and visibility across the company, improve operational efficiency and effectiveness and increase the flexibility to address business change.

However, we can gradually adapt and customize SAP Business Suite applications through enhancement packages that mitigate the need for expensive and slow updates. The SAP Business Suite applications increase visibility across departments, facilitating business decisions and remove the bottlenecks of the process.

It presents several solutions as observed in Figure 2.
